

MAC TRAILER PRESS RELEASE

“MACsimizer just became a MAC-MEGAmizer”

MAC Trailer Manufacturing of Alliance, Ohio redesigned its mainstay materials “MACsimizer” half round aluminum dump trailer to increase payload capacity to directly compete with the volumes of the traditional square dump configurations. With the all new “patent pending” structurally engineered front end, the trailer now has a lower center of gravity, side heights increased to 74”, a capacity of 60 cubic yards and a tare weight of under 10,000 pounds. For the more abrasive loads, the trailer is available with a stainless steel liner. Operators prefer the half round design because it provides quick load release and channels material toward the belly center of the trailer throughout the entire dumping cycle. For further information, contact a MAC Regional Sales Manager or the MAC Authorized Dealer nearest you. MAC Trailer is the nation’s foremost manufacturer of straight truck bodies and dump, flatbed and transfer trailers.
