

MAC TRAILER PRESS RELEASE

“NEW MAC BOTTOM RAIL PROTECTS WIRING”

A new MAC extruded aluminum bottom rail has been engineered for all the MVP (MAC Vertical Panel) MACLOCK® smooth side dump and transfer trailers. The new rail is of a hollow design providing a weather resistant channel for the installation and wiring of the side lights that will help prevent maintenance costs stemming from wiring that has gone bad from winter road salt, mud, road-landfill debris and problems associated with exposure to the elements. MAC Trailer Manufacturing, of Alliance, Ohio, is a national leader in the manufacturing of dump, flatbed and transfer trailers. For further information, contact the Authorized MAC Dealer nearest you, visit www.MACtrailer.com or call 1-800-795-8454.
