

MAC TRAILER PRESS RELEASE

MAC TRAILER OFFERS THE JOST A440 MAGNUM LANDING GEAR WITH 5 YEAR NO LUBRICATION AS STANDARD ON ALL TRAILERS

MAC Trailer Manufacturing of Alliance, Ohio partnered with JOST to have the A440 MAGNUM Landing Gear standard on all MAC trailers. With a gear box filled with an artic grade all weather white grease the benefit of not having to lubricate the landing gear for 5 years equates to direct savings in reduced maintenance costs for the owner.

The sealed design of the system keeps water out and keeps water away from the rotating shafts to eliminate internal corrosion problems on the landing gear. And, the elevating screws are completely encased by a grease tube that lubricates each time the legs are extended or retracted.

The two speed landing gear has a rated lift capacity of 62,500 lbs.

This product upgrade reflects the ongoing commitment by MAC Trailer to provide trailers that will maximize operations and reduce maintenance costs.

MAC Trailer is a national leader in the manufacturing of dump, platform and transfer trailers. For further information, contact the Authorized MAC Dealer nearest you, visit www.MACtrailer.com or call 1-800-795-8454.
