

MAC Ergonomics

Air Controls

Features

Low Outboard Mounting

Long Lever Handles

Valve Identification

High Flow Rate Valves

Advantages

Valves are easily accessed from the ground without over reaching, eliminate pinch-points and reduce the potential driver will come in contact with hot pipes.

Long lever handles combined with thinnest wafer disc available reduce resistance (12ft/lbs.) making the valve easier to open and close.

Permanent, easy to read, aluminum stencils identify valve operation. Additionally, blow down line valve is colored coded with red paint.

Super thin disc design with smaller hubs in flow path yields up to 20% more open area. No external hardware that decreases flow and possible contamination to load.

Benefits

Promotes driver safety and makes it more comfortable for the driver to operate the trailer.

Easier operation means less wear and tear on the driver and promotes complete closure of valve ensuring a better seal and more effective use of the available air supply.

Aides driver training and promotes safe operation.

Increased air velocity moves product more efficiently, meaning shorter unloading times.
