

MAC Stairs

Inspire Driver Comfort and Promote Driver Safety

Features

Advantages

Benefits

Three-Points-of-Contact

Continuous three-points of contact make it more comfortable to the operator as he/she transitions on and off top of the trailer.

Having three points-of-contact minimizes the chances of slipping and falling from the ladder. Properly used, the climber is not likely to become unstable in the event one limb slips during the climb.

Vibration Isolators

Ladder handrails are secured and ride in special rubber bushing that isolate rails from road vibration.

Minimizing road vibration extends the useable life of the ladder handrail reducing maintenance costs while providing years of comfortable access to the top of the trailer.

Convenient Upper and Lower Grab Handles

Waist high lower grab handles allow operator to secure his hands to the ladder before his feet leave the ground. Upper grab handles extend up and over top of trailer at a height that ensures the operator has secure footing as he/she enters and exits top of trailer.

Convenient accessibility to ladder handrails encourages operators to utilize the benefits of having three points of contact.

Integrated Stair Steps

Equally spaced ergonomic stair like steps offer deep boot toe clearance for a more secure feeling. Outset hand rails allow operator to climb to top of while standing completely vertical.

The MAC ladder emulate the stairs typically found in homes across America allowing the operator to stand erect and more comfortably balance his/her weight as he/she traverses on to and off the top of the trailer.

Experience Excellence
